Summary

A graduate of the Federal University of Technology where he studied Environmental Technology, He ventured into software programming as a result of owns passion and convictions. He is Currently a Freelancer and Blogger, Prior to that, He was at Amabills Technology, as a Software Developer and at El-Academy as a Programing Tutor and Software Developer (Intern) where he taught many clients/students programming. Other experiences includes working at Recharge And Get Paid as a Wallet Funding Officer and at Walkre.com and Swifre.com as a Software Engineer. Strong skills are in Python, Php, Laravel, React, React Native, Graphql, Excel, JavaScript, Node.js, MongoDB, Html, Express.js, Nest.js, MySQL, Css, Rust, Java, Django, etc.

Experience

Full Stack Engineer
Walkre.com

Jan 2023 - Present (1 year)
As Lead Developer at walkre.com, I oversaw the design, creation, and implementation of the entire platform. Leveraging Laravel, a PHP framework, I orchestrated full-stack development, crafting RESTful APIs as the backbone for our walker platform.

For the frontend, I utilized Next.js, a JavaScript framework, to establish the initial application structure. I further tailored the structure to meet specific design requirements, integrating React for application logic, Redux for seamless state management, and employing CSS and HTML for precise styling and user interface design.

My role involved employing Laravel for backend development, ensuring robust API functionality, while implementing a sophisticated frontend architecture using Next.js, React, Redux, CSS, and HTML. This comprehensive approach enabled the seamless and efficient operation of walkre.com's platform, meeting both technical and design demands effectively.

Full Stack Software Developer
Swifre.com

Sep 2023 - Nov 2023 (3 months)
A blog where anyone can post article, it allows users to register and become part of the community.
Tech stacks used: JavaScript, react, Laravel, PHP, Node Js, SQL, Rest/Restful APIs, GraphQL
Project Hosted at swifre.com

Backend Software Developer
Amabills Technologies

Mar 2023 - Nov 2023 (9 months)
I utilized Laravel and Lighthouse GraphQL to develop APIs for 360corporation.co.

The architecture of the project 360Corporation revolved around a sophisticated multitenancy design. This allowed us to cater to various clients, each with their own distinct data and settings securely within the same application environment. Its features and/or functionalities included robust modules for accounting, feeds, work schedules, sales and payment records, messaging systems, staff and product inventory management, as well as detailed production activity tracking, and precise stock and inventory keeping.

Tutor and Software Developer (intern)

EL Academy

Feb 2022 - Feb 2023 (1 year 1 month)

As a Programming and Cybersecurity Instructor, I've played a pivotal role in equipping students and clients with essential skills in programming languages such as Python and PHP within a concise three-month curriculum. Additionally, I've provided comprehensive training in Cybersecurity and Networking, ensuring individuals acquire the necessary expertise in these domains.

Beyond teaching, I actively contributed to daily decision-making and marketing strategies within the company, resulting in increased returns, improved profits, and heightened client satisfaction through regular engagement and meetings.

One notable project involved leading a PHP-based initiative to develop secure e-commerce websites for clients. Implementing stringent application security procedures ensured the creation of a robust and safe online platform for business transactions.

Moreover, I provided hands-on guidance to students and clients in utilizing frameworks like Django for Python and Laravel for PHP. This approach equipped them with practical knowledge and experience crucial for successful web project development.

My role has been instrumental in imparting technical knowledge and practical skills, ensuring proficiency in programming languages, cybersecurity, networking, and adeptness in employing frameworks to execute impactful web projects.

Wallet Funding Officer, Customer Care Representative

Recharge And Get Paid DRC

Mar 2019 - Dec 2021 (2 years 10 months)

As a Wallet Funding and Customer Care Representative at Recharge and Get Paid Company, I facilitated manual client wallet funding through the administrator backend dashboard, ensuring accurate crediting of funds into client accounts on our website. My role involved rigorously verifying payment documents to prevent fraudulent transactions and maintain accurate records, minimizing potential losses.

Additionally, I handled incoming calls, addressing client queries, complaints, and providing guidance to resolve their challenges promptly. Managing a substantial client base of approximately 1 million, I focused on expanding our customer reach while ensuring timely service delivery, thereby enhancing daily customer satisfaction levels.

Overall, my responsibilities included meticulous wallet funding management, fraud prevention, responsive customer care, and proactively expanding our client base, contributing to sustained client satisfaction and operational efficiency at Recharge and Get Paid Company.

Founder

Walker Nigeria

Jan 2016 - Jan 2021 (5 years 1 month)

Walker is a website which books hotel reservations, flight tickets, tourism destination and car renting facilities for her clients
